HOW IT HELPS PREVENT GUM DISEASE and CAVITIES: The **SOLADEY-2** toothbrush with the titanium dioxide rod neutralizes and removes plaque. It is the bacteria in plaque which acts on food, producing acid, **which causes bad breath, cavities, and gum disease.** Normally, saliva neutralizes this action, but when plaque builds up, it acts as a barrier, preventing the neutralization action of saliva. Clinical studies prove that the **SOLADEY-2** reduces plaque buildup, by working with saliva. Testing in Japan and Germany, verify this, and studies at The University of Saskatchewan concluded that the **SOLADEY-2** had “**a significant inhibitory effect on both total acid, and lactic acid, by the cariogenic bacteria. Acid production, by plaque bacteria has been implicated as one of the prime causes of dental cavities. In conclusion, there is solid evidence that semi-conductor toothbrushes such as the SOLADEY-2 are highly effective, with superior plaque removing ability.**”

This new invention has been getting excellent feedback from millions of users. It provides continuous plaque reduction and a cleaner mouth with sparkling teeth. The brush does not vibrate, there is no electric shock, and no unpleasant taste. It provides a long-lasting, unusually clean feeling **using a very minimal amount of toothpaste.** And the price is remarkably low. The Titanium Dioxide rod does not wear out, and the brush heads are replaceable.
